5% EPS beat on NII, provision, and tax. BK delivered 27.4% ROTCE, an 8th straight qtr of positive operating leverage, & an outlook for > 100bps more leverage to come in '26. Importantly, mgmt. raised medium-term return targets, as we anticipated. Remain OW. PT +$8 (+6%) to $132.

Key Takeaways

- The bar has been raised w/ higher return targets: ROTCE of 28%± (vs. ≥23% prior & 26.4% in '25) and pre-tax margin of 38%± (vs. ≥33% prior & 36% in '25).
- After >500bps of optg. leverage in '25, mgmt. expects >100bps of optg. lev. in '26 on 5%± revenue growth & 3-4% expense growth, which we expect they beat.
- 5%± revenue growth includes NII/fee growth a little above/below 5% respectively. NII assumes flat deposit levels, and fee guide assumes flat markets.
- We model NII above guide at 10.7% y/y on 6.5% y/y deposit growth (aided by QT ending / cap mkts growth) and higher NIM from asset repricing.
- We model expenses above guide at +4.6% y/y, as BK can agilely flex investments up on higher revs & still achieve 200bps of optg. lev (i.e. the North Star).

ICYMI: BNY: Key Takeaways from Meetings in Asia (20 Nov 2025)

What We Changed: Raising 2026 EPS by +16c (+1.9%) to $8.69, mainly on higher NII (NIM-driven), mostly offset by higher expenses, higher share count, and lower fees. Raising 2027 EPS by +24c (+2.5%) to $9.75, mainly on higher NII (NIM-driven), partially offset higher expenses and higher share count. Raising PT by +$8 (+6%) to $132 based on a 13.5x 2027 EPS, or a ~3.6x P/TB against a 28% ROTCE, a half turn higher than prior multiple to reflect increasing returns, as mgmt raised the medium-term ROTCE target to 28% +/-.

Risk Reward – BNY Mellon (BK.N)

Positive Operating Leverage in Store as Platforms Operating Model Shows Through

PRICE TARGET $132.00

Our price targets are set by triangulating PE, PB vs ROE (a deconstructed PE) and cost of equity relative to our outlook for asset growth, credit risk, operating efficiency and capital return. Target Price reflects a 13.5x 2027 PE.

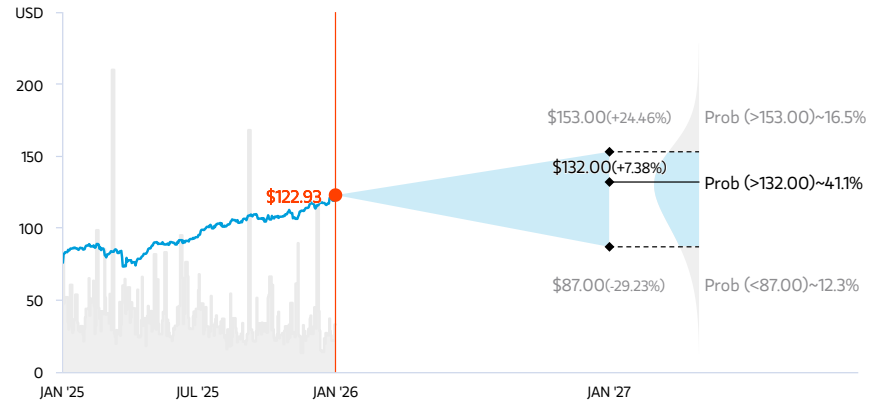
RISK REWARD CHART AND OPTIONS IMPLIED PROBABILITIES (12M)



Key: Historical Stock Performance ● Current Stock Price ◆ Price Target

Source: Refinitiv, Morgan Stanley Research, Morgan Stanley Institutional Equities Division. The probabilities of our Bull, Base, and Bear case scenarios playing out were estimated with implied volatility data from the options market as of 13 Jan 2026. All figures are approximate risk-neutral probabilities of the stock reaching beyond the scenario price in either three-months' or one-years' time. OVERWEIGHT THESIS

- Management views positive operating leverage as the North Star. We see + operating leverage through '28.
- Skew to fixed income means AUM/AUCA and associated fees should prove more resilient vs. peers in market pullback.
- Expect the end of QT could drive above-peer deposit growth, with potential NIB deposit upside from higher capital markets activity.
- Expect growth and efficiencies roll through as the firm de-silos via a transition to the Platforms Operating Model.
- Expect elevated capital return, helping BK move towards ROTCE target of 28% +/-.
- Low credit risk is +, as loans are sub-20% of IEA & skew to IG & HNW clients.
- BK trades below our ~13.5x 2027 P/E target (vs. our ~15% ROE outlook).

Risk Reward Themes

Self-help: *Positive*

View descriptions of Risk Rewards Themes here

BULL CASE $153.00

13.5x Bull Case 2027 EPS

Faster Than Expected Capital Markets Recovery. Faster M&A approvals with shorter time to completion drives accelerating M&A announcements and completions lifting capital markets activity relative to GDP to cycle averages in 2026. M&A financings drive accelerating C&I loan growth.

BASE CASE $132.00

13.5x Base Case 2027 EPS

Policy certainty drives modest growth. Economy moves past restrictive trade/immigration policy with the policy agenda largely set. Fed cuts are front loaded before pausing due to elevated inflation. Yield curve steepens and loan/deposit growth accelerates. Capital markets activity relative to GDP continues to improve gradually.

BEAR CASE $87.00

11x Bear Case 2027 EPS

Mild Recession. The U.S. enters a mild recession in 2026 with unemployment of 5.3%, driving up consumer NCOs. C&I NCOs increase to ~50% of 2001/02 recession levels. Fed cuts more aggressively as risks to growth mount.

Morgan Stanley does not assign ratings of Buy, Hold or Sell to the stocks we cover. Overweight, Equal-weight, Not-Rated and Underweight are not the equivalent of buy, hold and sell. Investors should carefully read the definitions of all ratings used in Morgan Stanley Research. In addition, since Morgan Stanley Research contains more complete information concerning the analyst's views, investors should carefully read Morgan Stanley Research, in its entirety, and not infer the contents from the rating alone. In any case, ratings (or research) should not be used or relied upon as investment advice. An investor's decision to buy or sell a stock should depend on individual circumstances (such as the investor's existing holdings) and other considerations.
